CONTENTS

INTRODUCTION 1
Preface 3

I GRAIN BOUNDARY PROPERTIES 9
1 Review of grain boundary motion 13

1.1 Mathematical description of grain boundaries 13

1.2 Grain boundary motion 15
1.2.1 Energetic reasons for grain boundary motion 15
1.2.2 Thermodynamic aspects of grain boundary motion 19
1.2.3 Motion of curved grain boundaries 27
1.2.4 Motion of planar grain boundaries 35

2 Motion of individual grain boundaries under the influence of mechanical stress fields 39

2.1 Experimental procedure 39
2.1.1 Bicrystal growing 40
2.1.2 Methods to measure grain boundary motion 47
2.1.3 In-situ measurement of grain boundary motion 48

2.2 Experiments on planar tilt grain boundaries 51
2.2.1 Symmetric tilt grain boundaries 51
2.2.2 Asymmetric tilt grain boundaries 67

2.3 Experiments on planar twist grain boundaries 70

2.4 Investigation of grain boundary sliding 76
2.4.1 Experimental procedure 76
2.4.2 Symmetric <112>-tilt grain boundaries 77
2.4.3 Symmetric <100>-tilt grain boundaries 78
2.4.4 Comparison with grain boundary migration 78

2.5 Experiments on curved grain boundaries 80
2.5.1 Symmetric <112>-tilt grain boundaries 80
2.5.2 Symmetric <111>-tilt grain boundaries 82
2.5.3 Asymmetric <111>-tilt grain boundaries 82

II THEORETICAL CONCEPTS 85

3 Conditions and assumptions 89

3.1 Structure of grain boundaries 89
3.1.1 Dislocation models of grain boundary structure 89
3.1.2 CSL theory of grain boundaries 92
3.1.3 Random grain boundaries and Frank's rule 95

3.2 Basics of continuum mechanics 99
3.2.1 Basic equations 99
3.2.2 Description of dislocations 107

3.3 Interactions between mechanical stresses and grain boundaries 114
3.3.1 General assumptions 114
3.3.2 Individual grain boundaries and stress fields 116

4 Mechanisms of grain boundary motion 125

4.1 Motion of planar tilt grain boundaries under constant stresses 125
4.1.1 General remarks 125
4.1.2 Motion of low angle grain boundaries 133
4.1.3 Motion of high angle grain boundaries 137
4.1.4 Asymmetric tilt grain boundaries 138

4.2 Motion of planar twist grain boundaries under constant stresses 139

4.3 Comparison with motion of curved grain boundaries 142
4.3.1 Low angle grain boundaries 142
4.3.2 High angle grain boundaries 143
4.3.3 Asymmetric high angle grain boundaries 146

5 Grain boundary mobilities 147

5.1 Mobility of curved grain boundaries 147

5.2 Mobility of planar grain boundaries 152

5.3 Absolute grain boundary mobility 160

6 Transition from low angle to high angle grain boundaries 165

6.1 Transition angles 165

6.2 Brandon criterion 176

6.3 Correlation of structure and transition angle 179

7 Summary and conclusions 185

7.1 Summary 185

7.2 Conclusions 188

III GRAIN BOUNDARY NETWORKS 191

8 Grain growth 195

8.1 Description of grain growth 195

8.2 Kinetics and microstructure evolution during grain growth 199

9 Microstructure evolution in polycrystals 203

9.1 Experimental procedure 203

9.2 Grain growth kinetics under the influence of shear stresses 206
9.2.1 Area evolution and average grain sizes 206
9.2.2 Investigation of grain size distribution 211
9.2.3 Grain growth kinetics 213
9.2.4 Investigation of the grain topology 217

9.3 Texture evolution 221

10 Grain growth under the influence of mechanical stresses 227

10.1 Description of model 227

10.2 Grain growth rates for single grains 232
10.2.1 Example: 3-sided grain 232
10.2.2 Example: 4-sided grain 236
10.2.3 Example: 8-sided grain 241

10.3 Application of the model to grain ensembles 245
10.3.1 Description of ensemble 245
10.3.2 Grain growth for different configurations 247

11 Discussion and conclusions 251

11.1 Comparison experiments and theory 251

11.2 Comparison experiments and model 258

11.3 Conclusions 262

IV APPLICATIONS 265
12 Grain boundary engineering 269

12.1 Basic ideas of grain boundary engineering 269

12.2 CSL concept in grain boundary engineering 272

12.3 Influencing microstructure 276

13 Application of grain boundary mechanics 283

13.1 Experimental procedure 283
13.1.1 Characterization of the initial state 283
13.1.2 Route 1: Strain annealed samples 286
13.1.3 Route 2: Strain recrystallized samples 287

13.2 Characterization of microstructure 288
13.2.1 Grain size evolution 288
13.2.2 Grain boundary misorientation distribution 293
13.2.3 Orientation distribution and texture 298

14 Summary and discussion 303

14.1 Summary 303

14.2 Discussion 306
