Table of contents

Impact of the work.....	8
Summary of the PhD-thesis	11
1 Introduction	13
1.1 Self-assembly.....	13
1.1.1 The variety of self-assembled structures.....	14
1.1.2 Self-assembly of amphiphilic molecules	14
1.1.3 Hierarchically organized structures in nature	15
1.2 Drug delivery	17
1.2.1 The classical drug delivery approach	17
1.2.2 Payload delivery in nature	17
1.2.3 Smart material drug delivery concepts.....	18
1.3 The need for smart materials and their potential for drug delivery.....	19
1.3.1 Biocompatibility & biodegradability	20
1.3.2 Market demand for nano-sized drug delivery systems	20
1.4 Synthesis of amino acid based amphiphilic materials	21
1.4.1 Polymerization	21
1.4.2 Hybrid materials.....	22
1.4.3 Solid phase peptide synthesis.....	22
1.4.4 Recombinant protein expression.....	24
1.4.5 Purification of amphiphilic peptides	24
1.5 Gramicidin – a short, hydrophobic, and membrane-integrating peptide	25
1.6 Scope of the thesis	27
1.7 References.....	28
2 Reversible peptide particle formation using a mini amino acid sequence	31
2.1 Abstract	32
2.2 Introduction.....	32
2.3 Results and discussion.....	34
2.3.1 Dimerization capacity.....	34
2.3.2 Charged amphiphilic peptide – C-K ₃ -gT	36
2.3.3 Electrically neutral amphiphilic peptide – acetylated AcC-X ₃ -gT.....	37

2.4	Conclusion	42
2.5	Supporting information	44
2.6	References	49
3	Hierarchical organization of purely peptidic amphiphiles into peptide beads	51
3.1	Abstract	52
3.2	Introduction.....	52
3.3	Results and discussion	53
3.4	Conclusion	61
3.5	Supporting information	62
3.6	References.....	64
4	From fibers to micelles using point mutated amphiphilic peptides.....	67
4.1	Abstract	68
4.2	Introduction.....	68
4.3	Results and discussion.....	70
4.3.1	Design of amphiphilic peptides.....	70
4.3.2	Amphiphilic character of the peptide library.....	71
4.3.3	Degree of acetylation influences micellization behavior.....	76
4.4	Conclusion	78
4.5	References.....	79
5	Exploiting dimerization of amphiphilic peptides to form vesicles	81
5.1	Introduction.....	82
5.2	Results and discussion.....	83
5.3	Conclusion	88
5.4	References.....	89
6	Peptide beads: applications and biocompatibility	91
6.1	Abstract	92
6.2	Introduction.....	92
6.3	Results and discussion.....	93
6.3.1	Peptide bead formation and payload embedding.....	93
6.3.2	Cell internalization	96
6.3.3	Toxicity and therapeutic effect	97
6.4	Conclusion	100
6.5	References.....	102

7	Densely packed composite peptide-gold nanoparticles	103
7.1	Abstract	104
7.2	Introduction.....	104
7.3	Results and discussion.....	105
7.3.1	Self-Assembly of the pure Ac-X ₃ -gT-C	105
7.3.2	Self-assembly of the Ac-X ₃ -gT-C–GNP composite material	106
7.4	Conclusion	108
7.5	References.....	109
8	General conclusion and outlook	110
9	Experimental part.....	112
9.1	Materials.....	112
9.2	Peptide synthesis.....	112
9.3	Peptide purification, post modification and characterization	113
9.4	Nanostructure formation	116
9.5	Nanostructure characterization	116
9.5.1	Microscopic methods.....	116
9.5.2	Scattering methods	117
9.5.3	Spectroscopic methods.....	118
9.5.4	Electron paramagnetic resonance	119
9.5.5	Gel permeation chromatography (GPC)	120
9.5.6	Tensiometry	120
9.6	Biological experiments	120
9.6.1	Cell viability tests on THP-1 cells (MTS assay)	120
9.6.2	Gene silencing.....	121
9.7	References.....	122
10	Acknowledgements	123
11	Curriculum Vitae and list of publications	125
12	List of synthesized and remaining peptides	128
13	Abbreviations.....	131
